

# TALENT HIVE

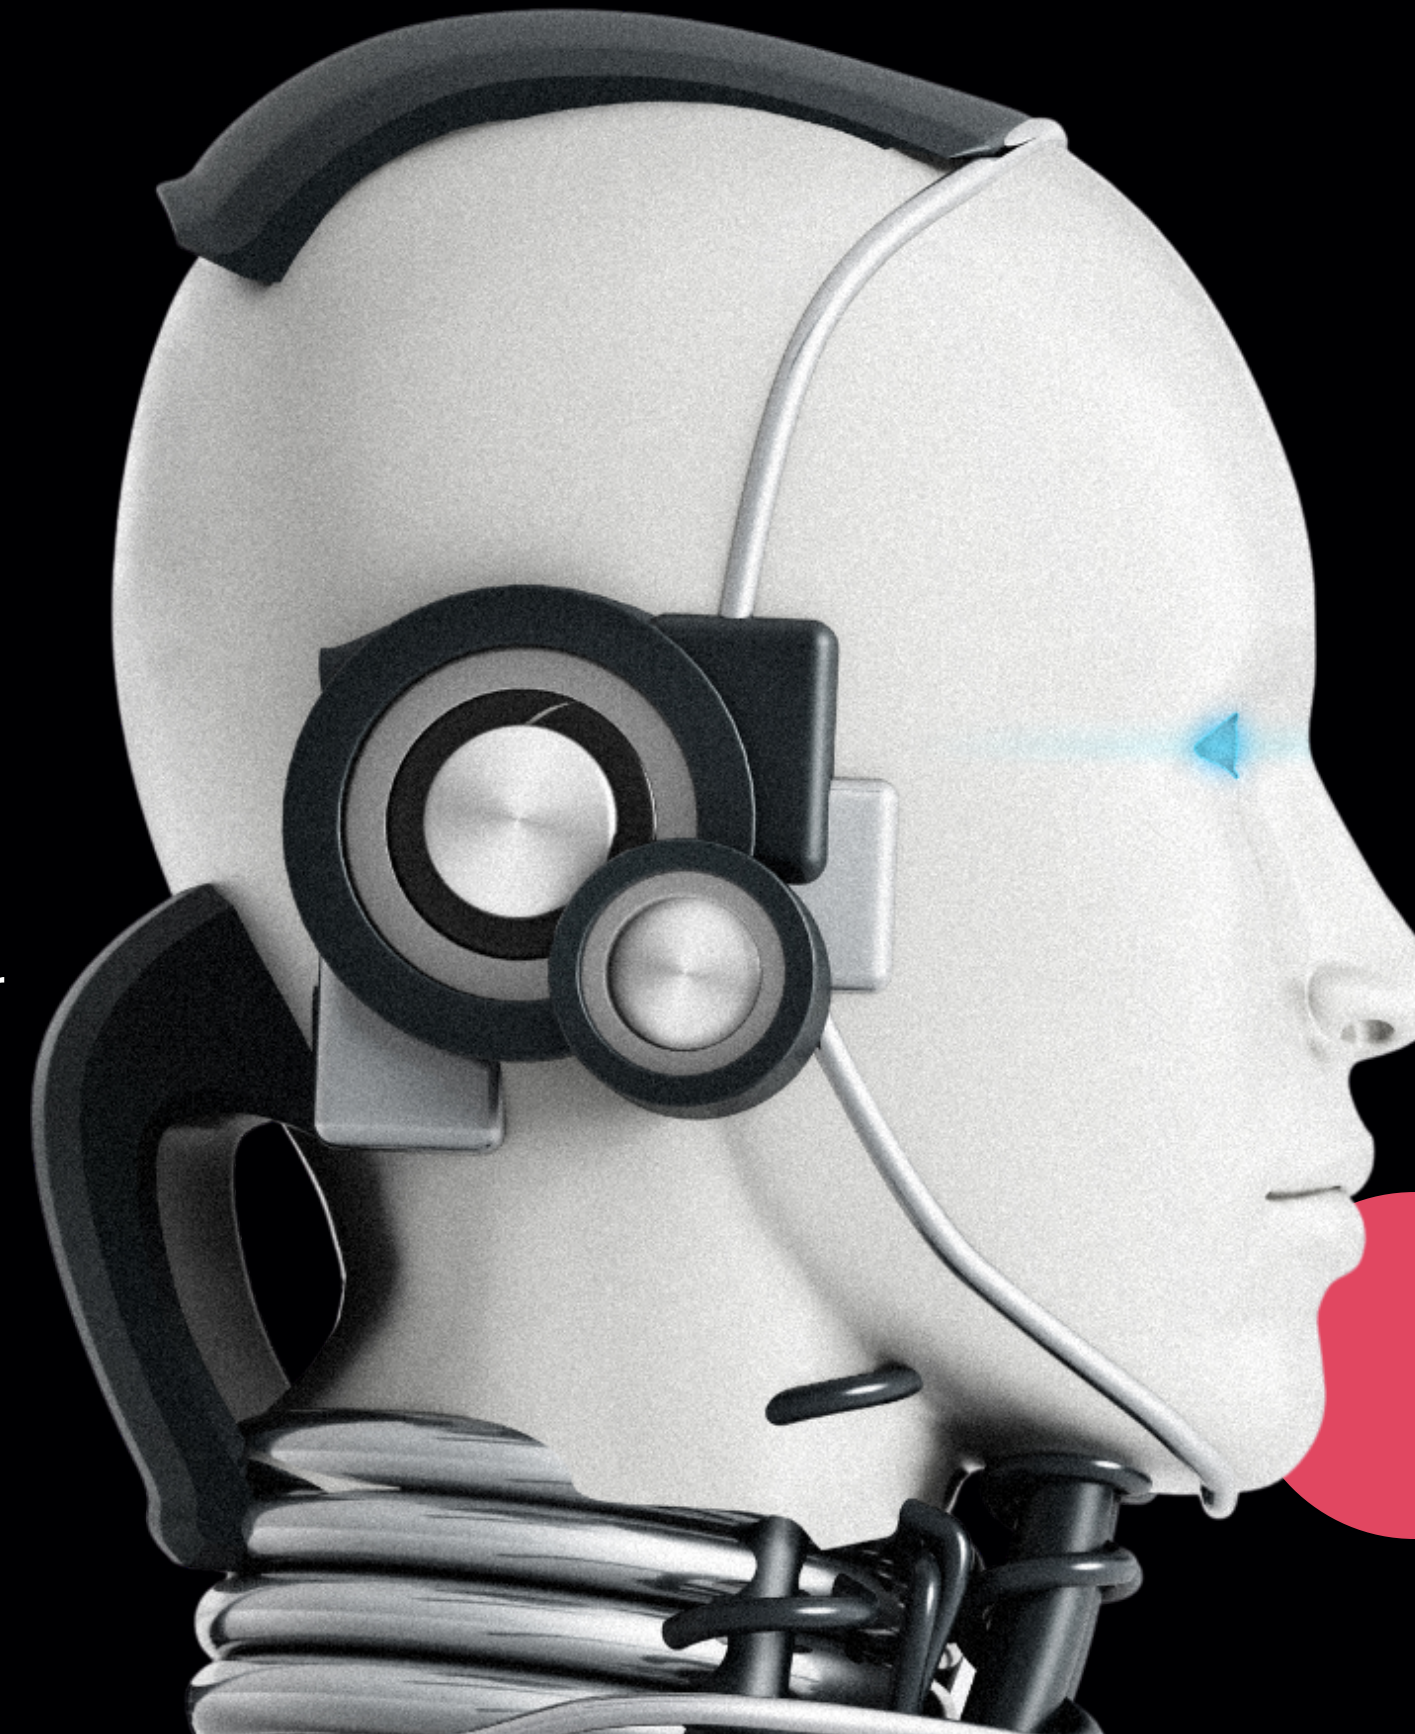

- B U Z Z I N G   W I T H   T A L E N T -

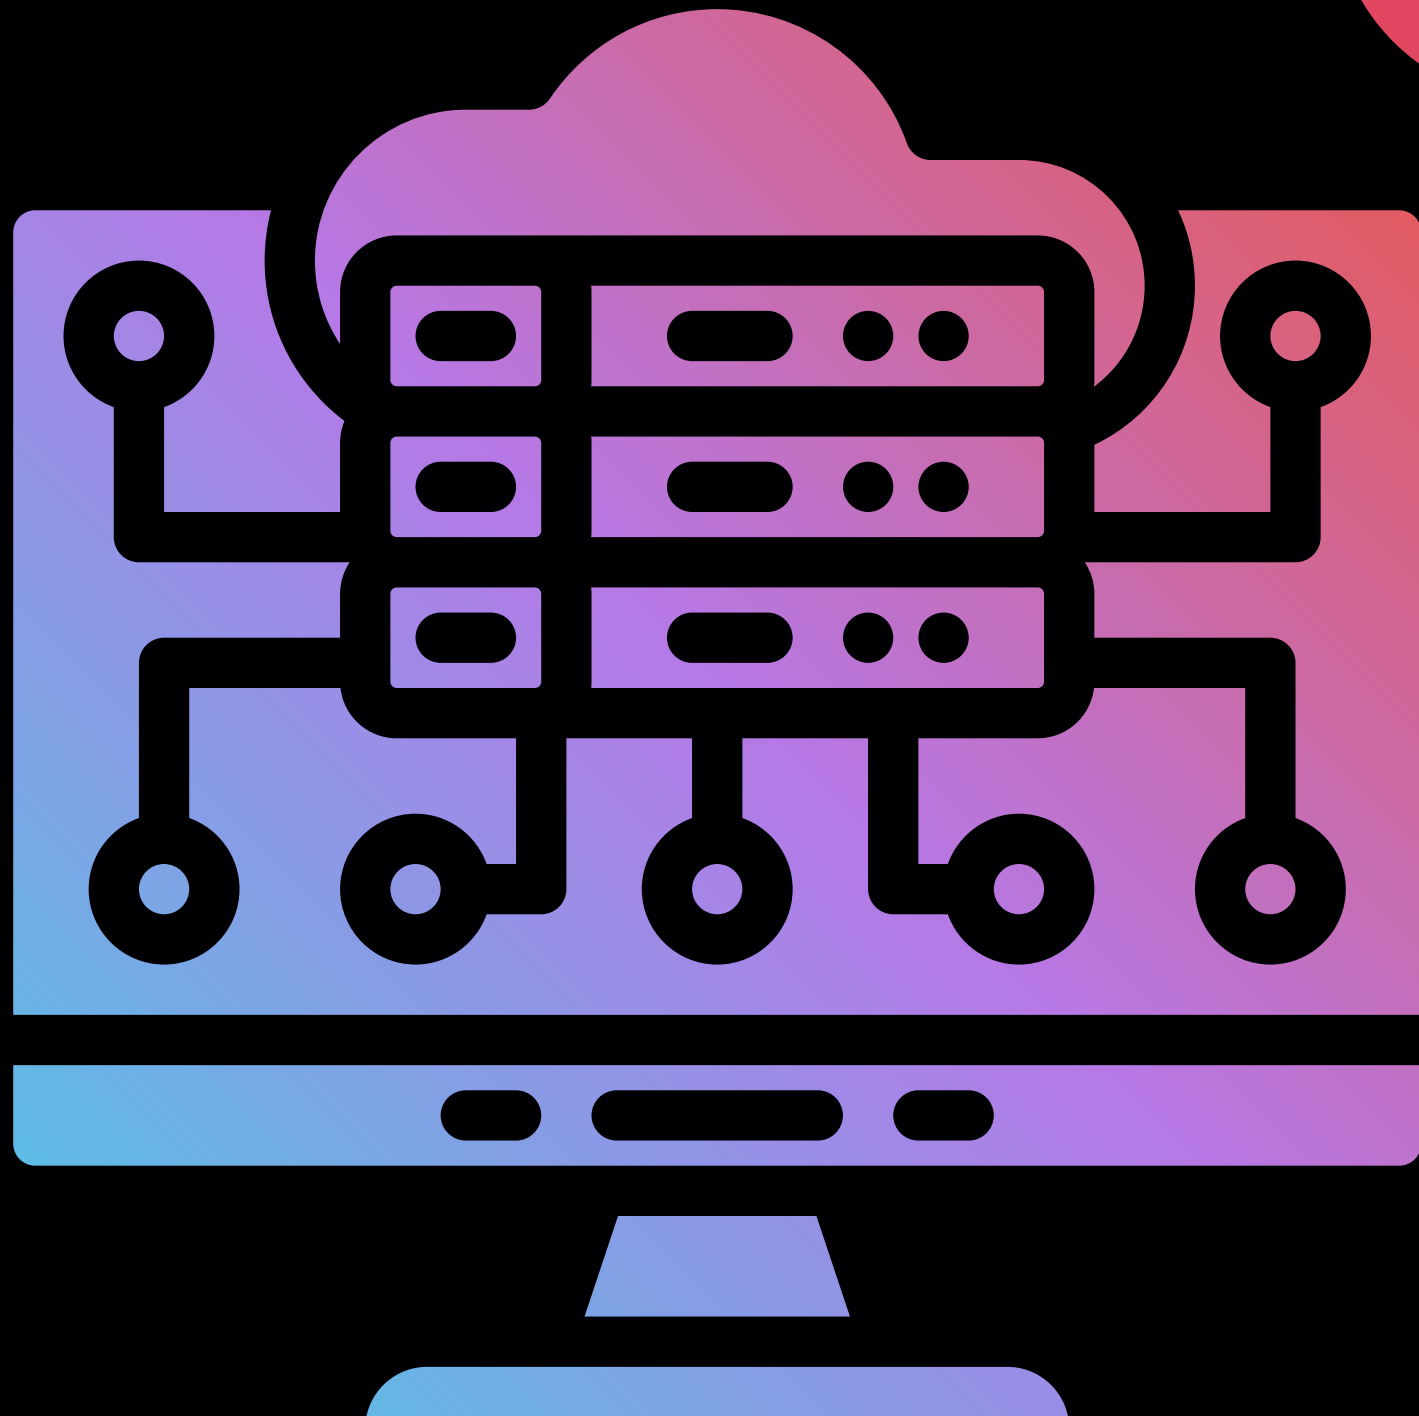

# ABSTRACT

Our project, TalentHive, aims to revolutionize the job search and recruitment process. With its advanced technologies, TalentHive provides personalized job and candidate recommendations based on qualifications and experience. The app offers a user-friendly interface for job seekers to easily browse and search for job opportunities based on their preferences and qualifications, as well as providing helpful resources such as resume writing guides and interview preparation tips. Recruiters can use the app to post job openings, search for candidates, and schedule interviews. Additionally, TalentHive's resume analyzer feature provides career recommendations, courses recommendations, and skills recommendations based on user data. The future scope of TalentHive includes expanding its reach to international markets, improving its AI algorithms, and implementing blockchain technology for enhanced security.

# PROBLEM STATEMENT

- The current job market lacks a reliable and efficient system to match job seekers with open positions, resulting in frustration and wasted time and resources.
- This problem is becoming more complex with the increasing use of technology and the rise of remote work.
- Innovative solutions leveraging the latest technologies and techniques, such as new algorithms and data analytics tools, are needed to create a more efficient and effective recruitment process.

# OBJECTIVE OF PROJECT

- 01** To create an app that simplifies and streamlines the job search and recruitment process for both job seekers and recruiters.
- 02** To leverage advanced technologies, such as OCR, NLP, and data analytics, to provide personalized job and candidate recommendations based on qualifications and experience.
- 03** To provide helpful resources, such as resume writing guides, interview preparation tips, course recommendations, and skills recommendations, to job seekers to help them target the right job opportunities and stay competitive in the job market.

# WHY IS THIS PROJECT IMPORTANT?

**01**

Streamlines the job search and recruitment process, saving time and resources for job seekers and recruiters

**02**

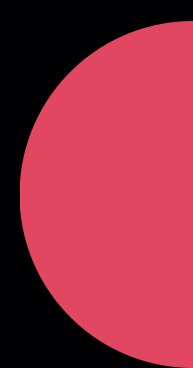

Leverages advanced technologies for personalized job and candidate recommendations

**03**

Provides helpful resources for job seekers to improve their chances of getting hired and stay competitive in the job market.

**04**

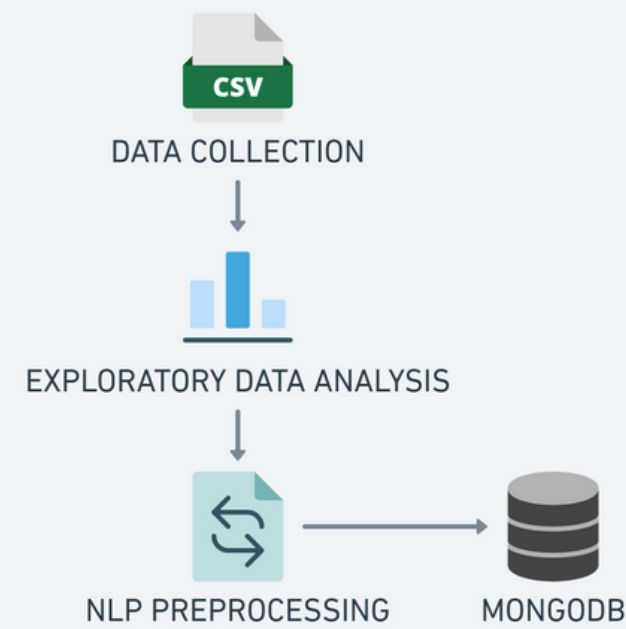

The project has the potential to reduce unemployment rates and help connect qualified job seekers with the right job opportunities, leading to a stronger economy and workforce.

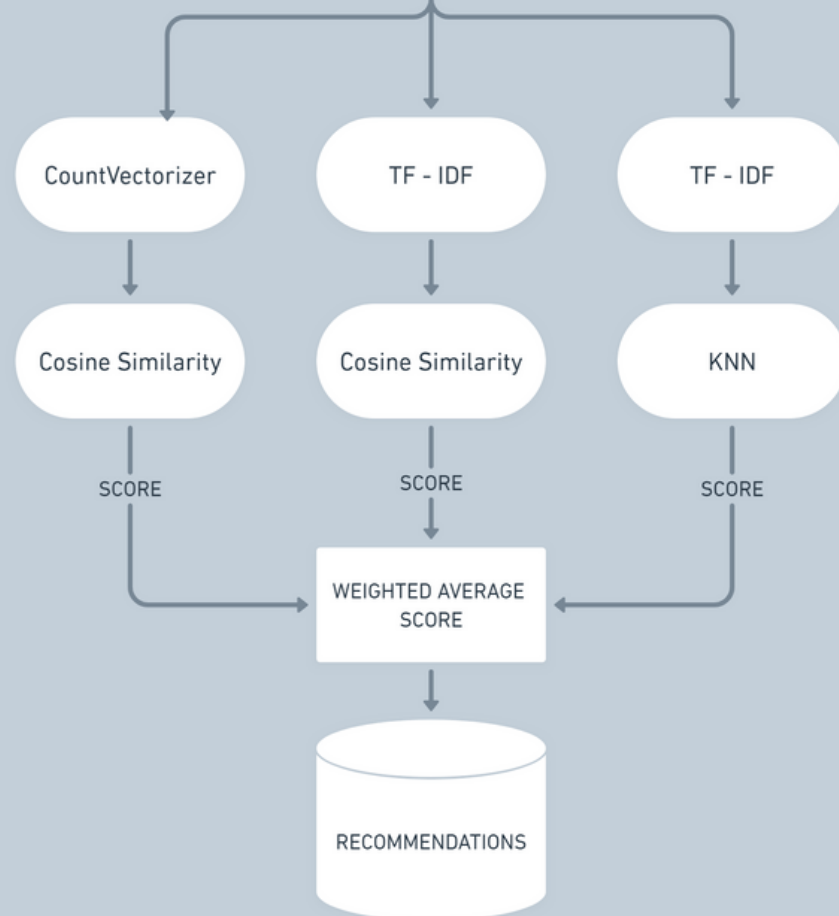

# MODEL ARCHITECTURE

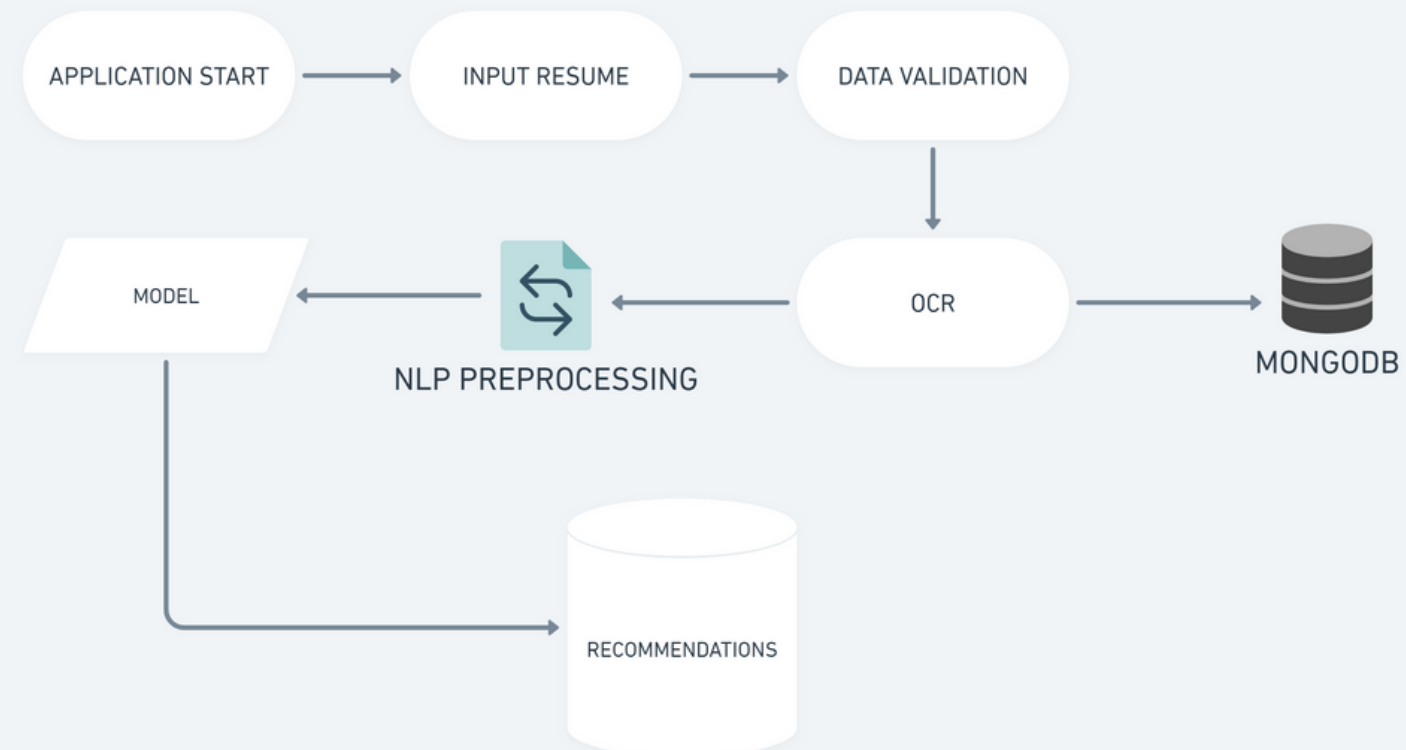

## PROJECT FLOW

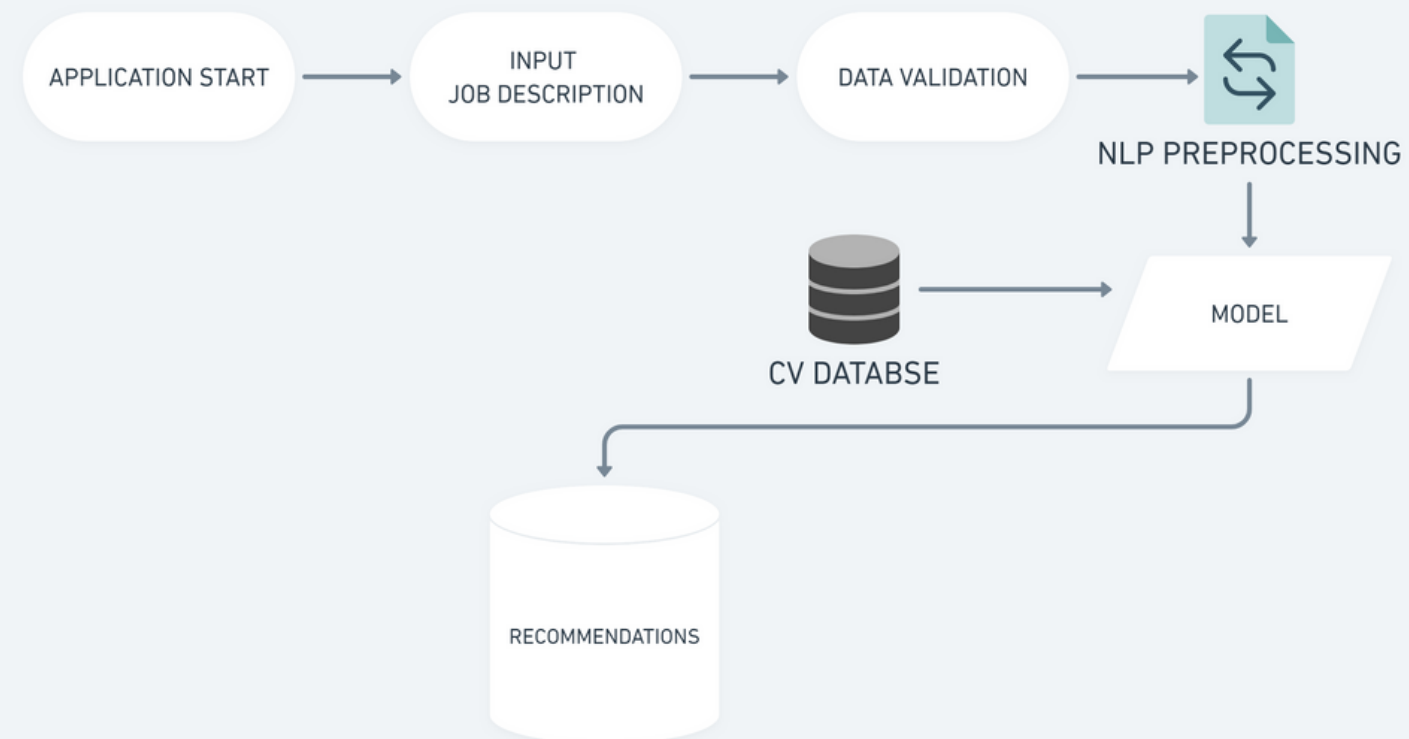

## MODEL

## JOB RECCOMENDATION

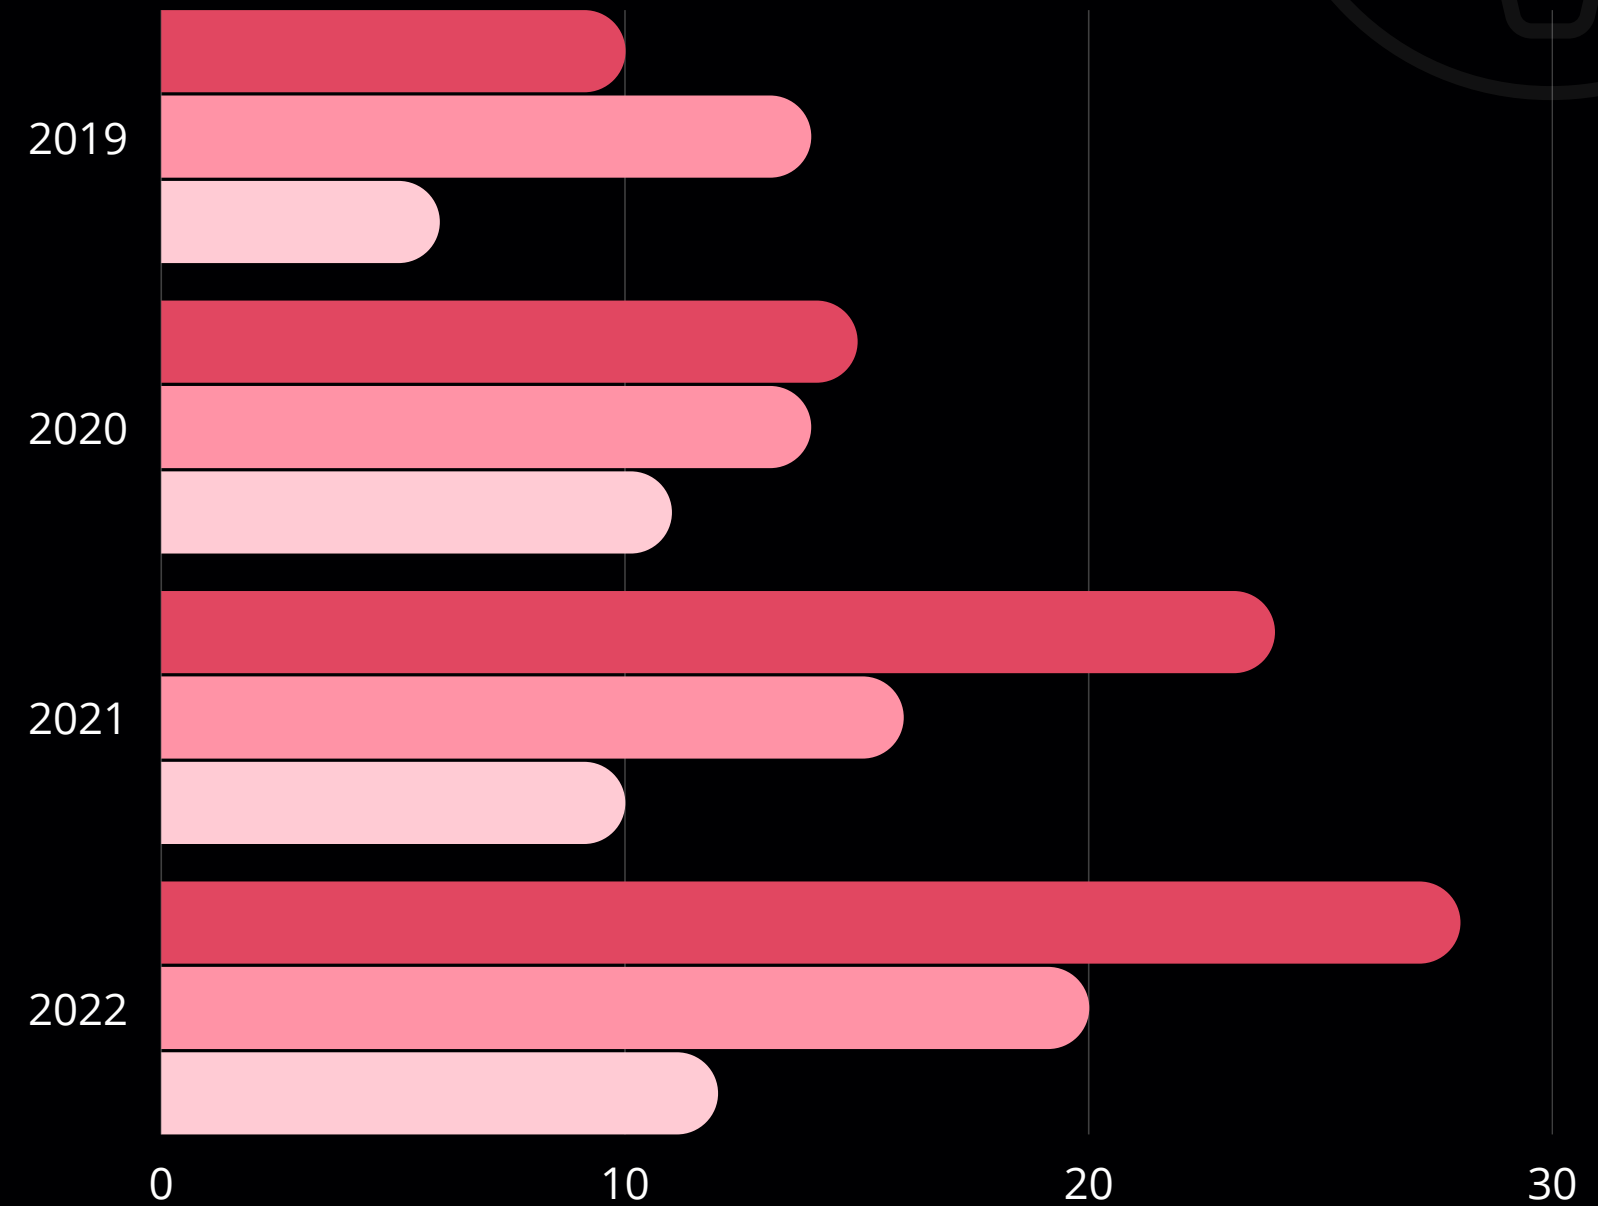

## CANDIDATE RECOMMENDATION

# What our App Offers

- JOB RECOMMENDATIONS
- CANDIATE RECOMENDATIONS
- RESUME ANALYZER

# APP PRODUCTS

## JOB RECOMMENDATION

Our app's job recommendation feature leverages advanced technologies such as Optical Character Recognition (OCR) and Natural Language Processing (NLP) to provide personalized job recommendations to job seekers based on their qualifications and experience. This feature saves time and streamlines the job search process, making it easier for job seekers to find the right job opportunities.

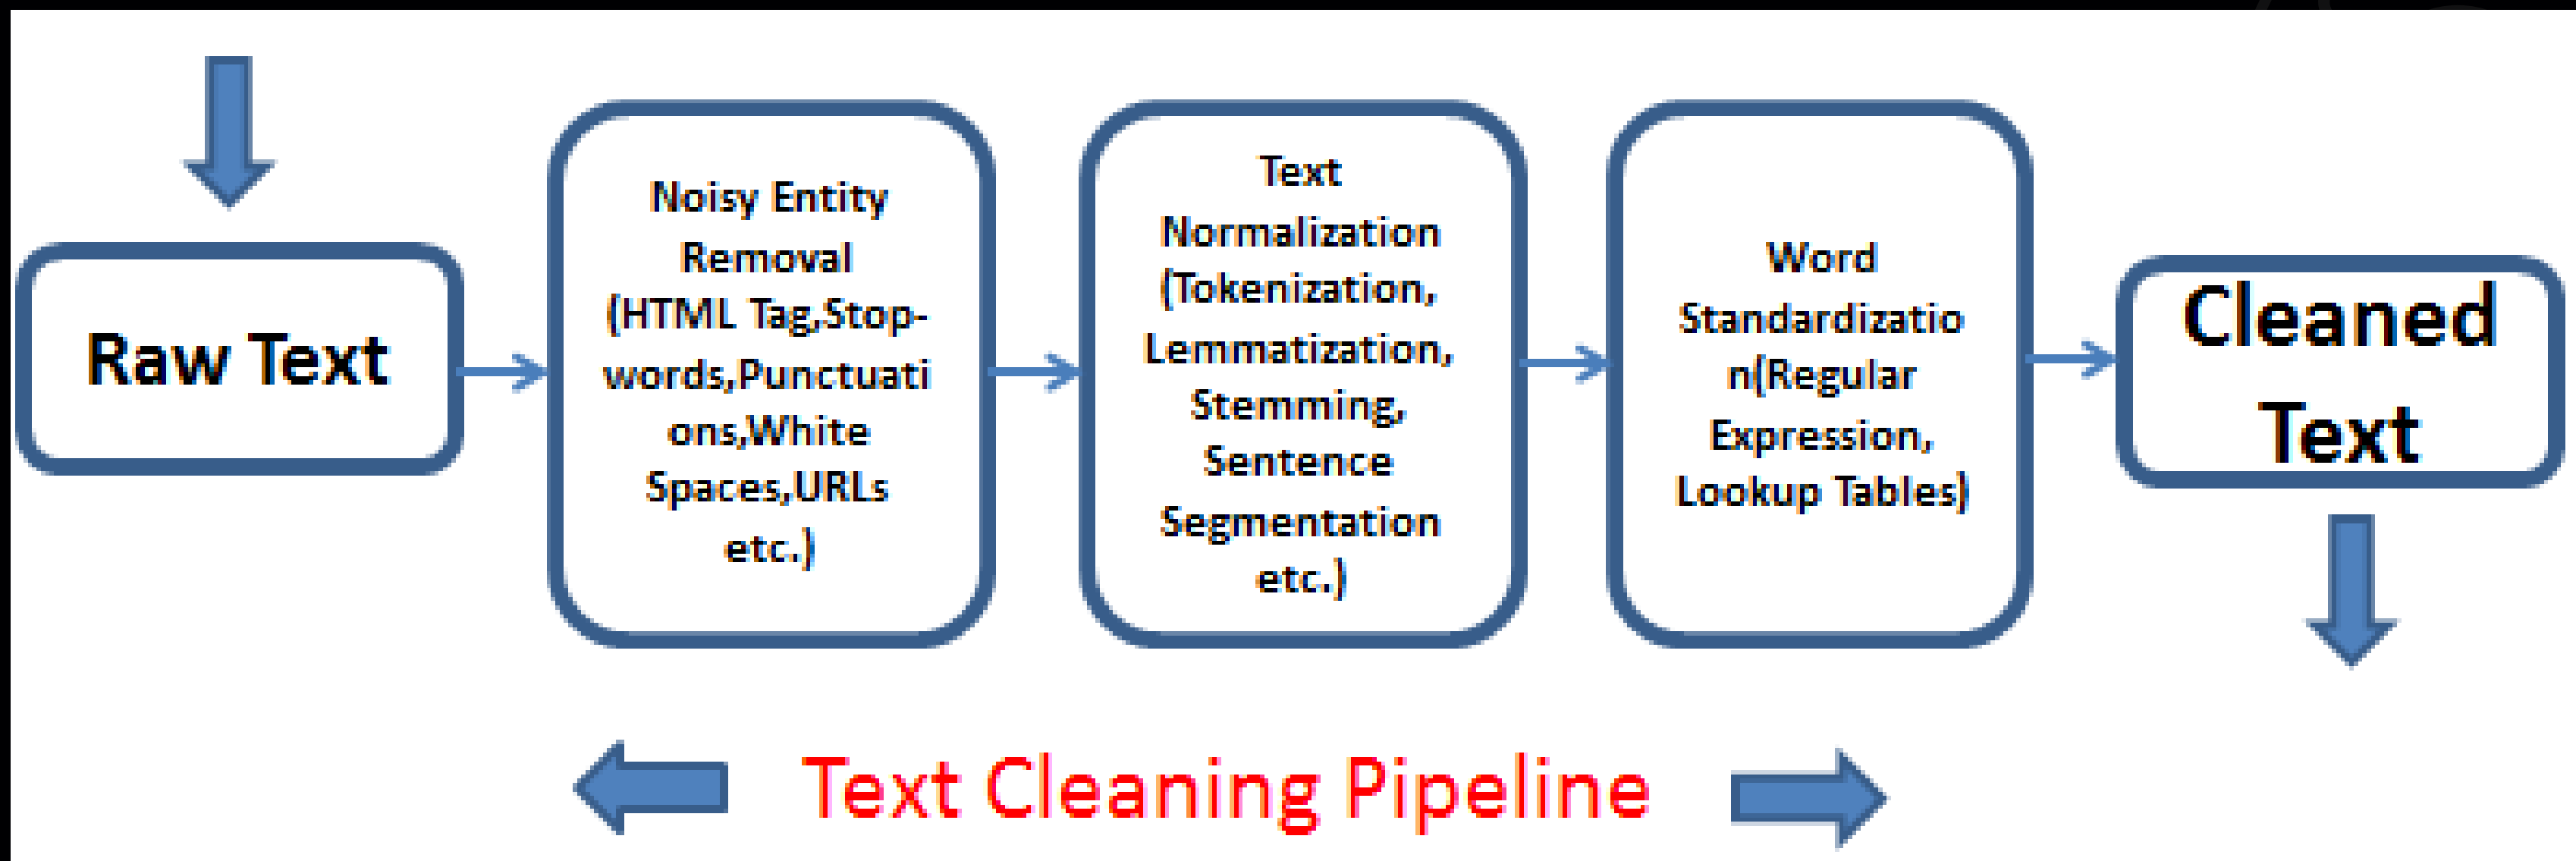

## CANDIDATE RECOMMENDATION

Our app's candidate recommendation feature allows recruiters to search for candidates based on their qualifications and experience. The feature leverages advanced search algorithms and comparison methods to identify the best-matching candidates for a job posting. This feature saves recruiters time and resources, making the recruitment process more efficient and effective.

## RESUME ANALYZER

Our app's resume analyzer feature analyzes resumes based on their completeness, relevance, and overall layout. The feature provides career recommendations, resume writing tips, course recommendations, and skills recommendations based on the user's education and job preferences. This feature helps job seekers improve their resumes' overall effectiveness, increasing their chances of getting hired.

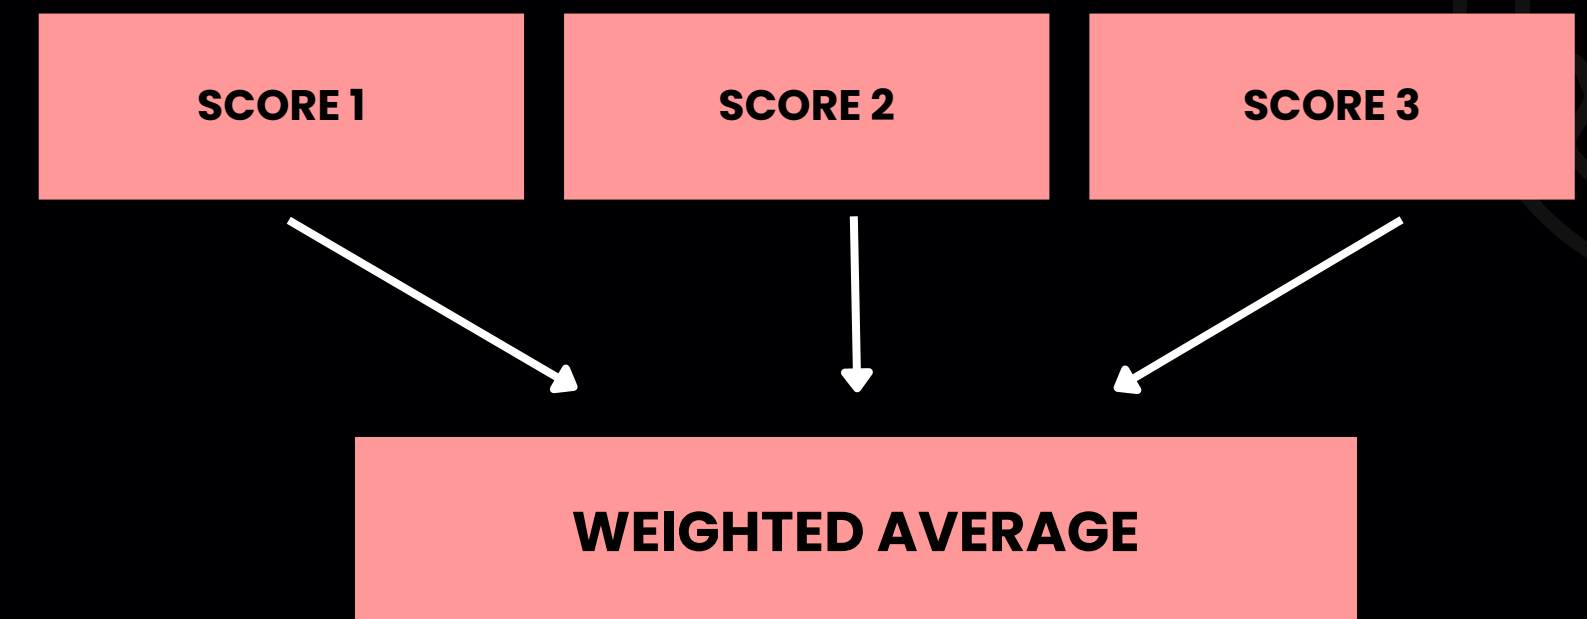

# TEXT CLEANING

In any machine learning task or data analysis task the first and foremost step is to clean and process the data. Cleaning is important for model building. Well, cleaning of data depends on the type of data and if the data is textual then it is more vital to clean the data.

# RECOMMENDATION SYSTEM

| MODEL 1          | MODEL 2          | MODEL 3  |
|------------------|------------------|----------|
| CountVectorizer  | TF - IDF         | TF - IDF |
| CosineSimilarity | CosineSimilarity | KNN      |
| SCORE 1          | SCORE 2          | SCORE 3  |

WE WILL BE COMBINING THE SCORES OF ALL THE THREE MODELS AND SCALE THEM ACCORDINGLY. IN THE END WE WILL GET A WEIGHTED AVERAGE OF ALL THE THREE MODELS

# WEB APP USING STREAMLIT

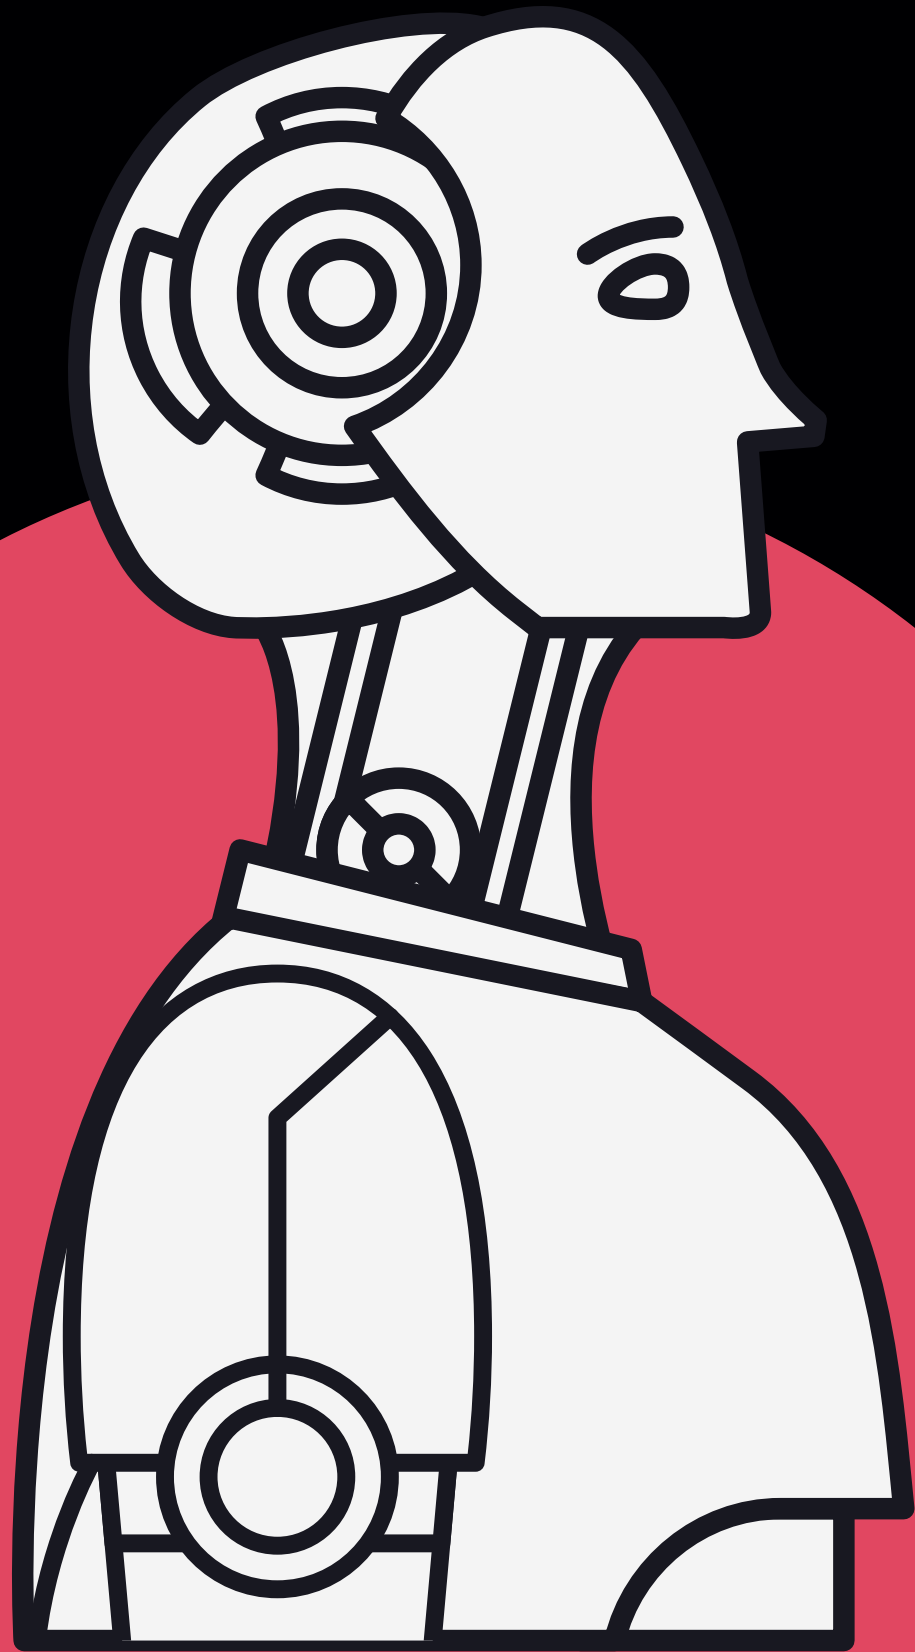

- Streamlit is an open-source framework in Python that helps us transform data science and machine learning scripts into interactive apps.
- It supports Python's fundamental plotting libraries such as Seaborn, Pyplot, Matplotlib, GraphViz, Plotly, etc.

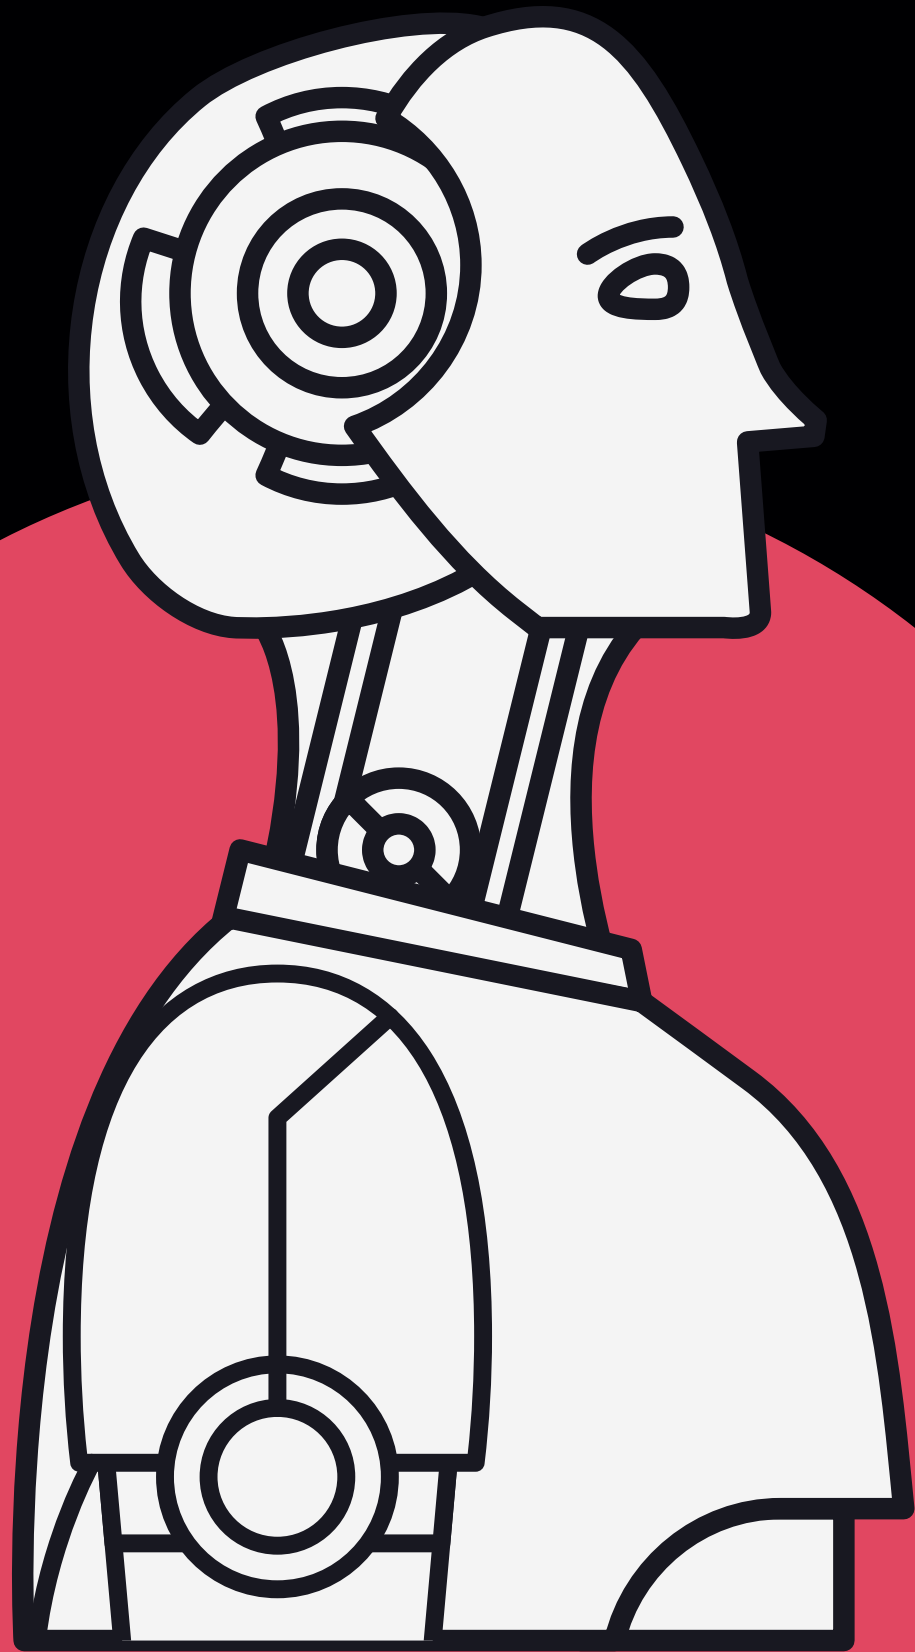

# CONCLUSION

- In summary, TalentHive utilizes advanced technologies such as OCR and NLP to provide job seekers and recruiters with personalized job and candidate recommendations.
- Additionally, the use of Apify allows for efficient and accurate data collection, leading to up-to-date and relevant job postings.
- TalentHive streamlines the recruitment process, saving time and resources for both job seekers and recruiters.

# FUTURE SCOPE

- **Integration with social media:** The app can integrate with social media platforms to allow users to leverage their professional network and increase their chances of finding the right job or candidate.
- **AI and Machine Learning:** The app can further improve its job and candidate recommendation algorithms by incorporating AI and machine learning techniques to provide more accurate and personalized recommendations.
- **Expansion to new markets:** The app can expand its services to new markets to help more job seekers and recruiters around the world.

THANK YOU
